The Research Foundation

n = 50 respondents · 49 columns · 8 sections · April 2026

WHO WE SPOKE TO

Students	Soft. Engineers	Architects	Doctors	Advocates
Researchers	Data Engineers	Bankers	UX Designers	Prod. Analysts

FRAMEWORK TRIPLE-STACK

Hooked Model — Nir Eyal
CODE Framework — Building a Second Brain
Hyperfocus — Chris Bailey

The Memory Problem

What We Lose & How We Cope

WHAT PEOPLE FORGET (avg rating 1–5)

6 ROOT CAUSES

HOW PEOPLE COPE TODAY

People don't abandon note apps because they're bad — the moment of capture is too fast for any app to keep up with.

When It Hurts Most

Privacy, Trust & What 51 Tools Miss

WHEN IT MATTERS MOST

6.86	Work Meetings
6.48	Online Calls
4.12	Solo Work / Ideas
2.98	Before Sleep

Hard boundary: Personal conversations 3.58

Only 30% capture from habit — reward loop must be engineered

PRIVACY: THE ADOPTION GATE

7.24

Mean privacy concern

Median: 8.0/10 · 14% non-addressable

TOP TRUST FACTORS

- 72% No third-party sharing
- 64% E2E encryption
- 56% Delete anytime

TWO PRIVACY PERSONAS

MODERATE · score 5–7 Open with no third-party sharing + clear policy
HIGH · score 8–10 Full stack — E2E + local storage + delete anytime

51 TOOLS — 3 STRUCTURAL FAILURES

INSIGHT #7 Privacy-Connectivity Diagonal Private tools are disconnected. Connected tools are exposed. Nobody has broken this diagonal across all 51 tools.
INSIGHT #4 The Missing Mirror 50% demand daily digest. 36% want weekly. Supply across all 51 tools: zero.
INSIGHT #6 Cognitive Pipeline Tax Not one of 51 tools captures from more than 2 sources. User bridges every gap manually.

The 8 Gaps

Hooked Model Canvas · White Space Matrix

HOOKED MODEL CANVAS — ALL 8 PAIN POINTS

TRIGGERPP1 No Proactive Trigger 70% need fear or anxiety to open any tool	ACTIONPP2 No Effortless Capture 6.18/10 in-moment · 6.24/10 in conversation
INVESTMENTPP3 No Centralised Pipeline User manually bridges Gmail, WhatsApp, meetings	INVESTMENTPP4 Hard Organisation Tagging = extra work nobody signed up for
INVESTMENTPP5 Slow Retrieval Find old notes: 6.44 · Act on notes: 6.56	VAR. REWARDPP6 No Reflections Daily digest: 50% want, 0% have
VAR. REWARDPP7 No KM Identity Built PKM mean 7.08, median 8 — real system: screenshots	ROOT CAUSEPP8 Trust Paradox Fragmentation is defence, not preference

WHITE SPACE MATRIX — 10 TOOLS × 6 KEY GAPS

	Proactive Trigger	Effortless Capture	Central Pipeline	Auto Org.	Regular Reflect.	Privacy+ Connect
Notion	NO	NO	PAR	NO	NO	NO
Obsidian	NO	NO	NO	NO	NO	NO
Rewind AI	PAR	PAR	PAR	NO	NO	NO
Mem	PAR	NO	NO	PAR	NO	NO
Fireflies	PAR	PAR	NO	PAR	NO	NO
Reflect	NO	NO	NO	NO	PAR	NO
Apple Notes	NO	YES	NO	NO	NO	PAR
WhatsApp	NO	YES	NO	NO	NO	NO
Evernote	NO	PAR	NO	NO	NO	NO
Otter.ai	NO	PAR	NO	NO	NO	NO
NO count:	7/10	4/10	8/10	8/10	9/10	9/10

No tool simultaneously solves all 8 pain points. The product that does will not compete in an existing category — it will define a new one.

Who We're Building For

4 segments ranked by information exchange and penetration opportunity

ENTRY	GROWTH	EXPANSION	MONETIZE
ACADEMIC WHO Students, Researchers, Professors, Hardware Engrs. INFO EXCHANGE 3rd highest PENETRATION Easiest Zero switching cost. Campus network effect. No existing ecosystem to displace.	CREATIVE WHO Screenwriters, Designers, Architects, Authors, Musicians INFO EXCHANGE 4th — burst-driven PENETRATION Easy Community-driven adoption. Open to new tools. Strong referral potential.	PROFESSIONAL WHO Doctors, Therapists, Journalists, Consultants INFO EXCHANGE 2nd highest PENETRATION Moderate Trust established. Regulated need. Moderate willingness to pay.	FINANCIAL WHO Traders, Lawyers, Businessmen, Sales Pros INFO EXCHANGE Highest PENETRATION Hardest Highest stakes. Highest WTP. Existing broken systems — build trust first.

The Feature Canvas

Frontend Features · Hooked Model mapped quadrant-to-quadrant from pain to solution

TRIGGER		ACTION	
How Mitra reaches you		How Mitra captures effortlessly	
MCP Forwarding Forward any message in WhatsApp, Gmail, Outlook. Connector reads only that thread. Consent built into trigger.		Auto-Organisation AI organises all captures automatically. One evening notification: does this look right? Yes/No. AI learns.	Framework Selection User picks framework at onboarding. They always know where things live — no surprise folders.
Accessibility Dot Floating dot iOS & Android. Tap → Quick Menu. Hold → Instant voice record with visual feedback.	Priority Notifications Smart nudges tied to Priority Matrix. Contextually timed — not random pings.	Natural Language Retrieval 'That meeting monday', 'logo file canva'. No syntax. No filters. In-app or via dot.	Priority Matrix Evening 2x2 Urgent/Important grid. Full priority landscape visible at a glance.
INVESTMENT		VAR. REWARD	
How Mitra builds switching cost		How Mitra makes you come back	
Data Investment Every capture and retrieval makes the system smarter. Leaving means losing accumulated intelligence.		Daily Summary Every evening: decisions made, insights captured, tasks completed. The mirror the market has never built.	
Universal Import Imports from Notion, Obsidian, Evernote, Google Keep, Apple Notes, Bear, PDF. Memory starts rich on day one.	KM Identity 3 years with Mitra — you think of yourself as a Knowledge Manager, not a note-taker.	Smart Rediscovery Google Photos 'On This Day' for knowledge. Ships Phase 2 after 90 days of data.	Task Completion Nudges Gentle nudges tied to Priority Matrix. Contextually timed by deadline and quadrant placement.

The Architecture

4-Layer Backend · Privacy by Design · MCP-Powered

4-LAYER ARCHITECTURE

Layer 1 — Information Layer

WhatsApp · Gmail · Outlook · Canva · Meetings · Notebooks

Where life happens. Product never reaches in uninvited.

Layer 2 — Connectors Layer

MCP Connectors — scoped read-only, encrypted in transit

Reads only what the user explicitly sends. Consent built into every trigger.

Layer 3 — LLM & Experts Layer

Router/Orchestrator · 6 Mixture-of-Experts Agents

Router reads trigger type and context, fires the right expert. No cross-user access.

Layer 4 — Central Memory Layer

Local Filesystem · Secure Cloud · Google Drive / iCloud

User controls location entirely. No backdoor. No third-party access.

LLM & EXPERTS LAYER — 6 AGENTS

EXPERT	PP	SHIPS
Capture Expert	PP2	Day 1
Organisation Expert	PP4	Day 1
Retrieval Expert	PP5	Day 1
Priority Expert	PP1	Day 1
Summarisation Expert	PP6	Day 1
Smart Rediscovery Expert	PP6+7	Phase 2
PRIVACY BY ARCHITECTURE		
Connector Layer: scoped read-only, encrypted · Memory Layer: user-controlled · Memory Lock: one-tap suspend		

The MVP

Frontend Features · 6 Experts · 3-Tier Memory Layer · Unified product from day one

FRONTEND — 10 FEATURES

MCP Forwarding	TRIGGER
Accessibility Dot	TRIGGER
Priority Notifications	TRIGGER
Auto-Organisation	ACTION
Framework Selection	ACTION
Natural Language Retrieval	ACTION
Priority Matrix	ACTION
Daily Summary	REWARD
Smart Rediscovery	REWARD
Task Nudges + Universal Import	INVEST

BACKEND — 6 EXPERTS (MOEs)

Capture Expert PP2 — Effortless capture
Organisation Expert PP4 — Hard organisation
Retrieval Expert PP5 — Slow retrieval
Priority Expert PP1 — No proactive trigger
Summarisation Expert PP6 — No reflections
Smart Rediscovery Expert PP6+7 — Phase 2

MEMORY LAYER — 3 TIERS

LOCAL FILE SYSTEM High concern · score 8–10 Filesystem MCP. Data never leaves device. <i>54% want local storage</i>
SECURE CLOUD Moderate concern · score 5–7 Internal MCP with E2E encryption. Zero third-party. <i>72% need no third-party sharing</i>
GOOGLE DRIVE / iCloud Lower concern · convenience-first Drive MCP connector. User's own account. <i>Cross-device sync priority</i>

All 6 experts active on day one · All 10 frontend features live at launch · No feature is optional — all are equally essential to the solution

A Day With Mitra

ICP: Academic · Yaswant, MTech researcher, IIT Hyderabad · Exam week

9:00 AM Research lab meeting	USER Forwards key decision to Mitra via WhatsApp MCP	MITRA Capture Expert tags it: 'Project Decision · Deadline relevant'
11:30 AM Reading a paper, gets an idea	USER Long-presses Accessibility Dot, speaks the idea	MITRA Capture Expert stores it. Red ring → green. Back to reading in 4 seconds.
2:00 PM Stuck on simulation	USER Quick Retrieve: 'that paper on clustering from last month'	MITRA Retrieval Expert surfaces it instantly inside the browser. No app switch.
6:30 PM Evening wind-down	USER Taps Accessibility Dot → Priority Matrix	MITRA Priority Expert shows 2×2 grid. Exam tomorrow in Urgent+Important. Relief.
8:00 PM Daily Summary arrives	USER Opens summary — reads decisions, ideas, tasks from the day	MITRA Summarisation Expert: 3 decisions · 2 ideas · 1 commitment. Mirror moment.
11:00 PM Deadline panic	USER Natural language: 'my notes from Prof. Kumar lecture week 3'	MITRA Retrieval Expert finds it. The perfect note at the perfect moment.

Go-To-Market

4 parallel tracks · We enter as a habit — we scale as infrastructure

01CUSTOMERS	02FEATURES	03INVESTORS	04PRICING
Academic first. Financial last. <i>Enter where switching cost is zero. Build habit across segments in sequence.</i> - Academic: campus referral engine - Creative: community seeding, forums - Professional: bottom-up enterprise pull - Financial: approached only after traction	MVP = 5 experts on day one. <i>Capture Expert ships first — no capture, no habit. Smart Rediscovery Phase 2 after 90 days of data.</i> - Day 1: Capture, Org, Retrieval, Priority, Summarisation - Phase 2: Smart Rediscovery Expert - Academic calendar drives crunch-period spikes - Referral triggers at moment of peak product value	Distribution deals first. Investment later. <i>At MVP stage we offer connector platforms a free engagement multiplier. We return with data.</i> - WhatsApp: every forward = new engagement event - Gmail: inbox open rates deepen email habit - Canva: users stay inside Canva longer - PDF Tools: documents become searchable memory	Students fully free. Enterprises pay. <i>Lifecycle bet: build habit at zero cost, monetise at graduation. Agent-based model charges for quality of output.</i> - Student Edition: fully free while enrolled - Creative: freemium base + specialised agents - Professional: subscription + agent hosting - Financial: premium + custom agent development

Distribution & Monetisation

The Lifecycle Bet · Agent-Based Revenue · Campus Referral Engine

THE LIFECYCLE BET

01

Student at college

Uses product fully free. Habit forms over semesters.

Zero CAC. Maximum habit depth.

02

Graduates, joins company

Habit already exists. Product travels with them.

No re-acquisition. No retraining.

03

Asks employer to provide it

Bottom-up pull from inside the company.

Sales motion starts from within. No outbound.

04

Company buys Enterprise

Team-wide license purchased.

Revenue unlocked without a single sales call.

AGENT-BASED MONETISATION

Free

Student Edition

All 5 MVP experts. Full features. No limits while enrolled.

Freemium

Creative Edition

Base capture + org free. Specialised creative agents paid.

Subscription

Professional Edition

All experts. Compliance-aware memory for regulated industries.

Premium

Financial Edition

All experts. Custom agents for specific financial workflows.

CAMPUS REFERRAL ENGINE

Get your college to X users — we sponsor your fest.

Students already organise fests. They already need sponsors. No admin approval. No professor sign-off. Referral spikes exactly at crunch periods when product value is highest.

Metrics, Moats & Vision

Defensibility that builds itself · The category we are defining

NORTH STAR METRIC

Connector layer exchange events per user per 2 days

Not downloads. Not sessions. Every exchange event is deliberate intent. A tool used every 2 days has cracked the trigger problem. That is the proof of habit.

LEADING INDICATORS

Day 7 retention	First week hook
Crunch period usage spike	PMF validation
Campus referral rate	Distribution engine health
Student → Enterprise conversion	Lifecycle bet validation

THREE MOATS

01 Data Moat

Personalised Memory

Every capture, retrieval, and validation makes the system smarter. Leaving means losing accumulated intelligence. Switching cost grows organically.

02 Identity Moat

The Knowledge Manager

A student using Mitra for 3 years thinks of themselves as a Knowledge Manager, not a note-taker. Identity is the strongest retention mechanism that exists.

03 Privacy Moat

Structural Architecture

Privacy is not a feature — it is the architecture. This structural guarantee cannot be copied with a policy update. It requires rebuilding from scratch.

THE VISION

A private friend in a professional environment.

Mitra.ai defines something new: the Private AI Memory Layer — captures without asking, organises without burdening, reflects without prompting, protects without compromising.

THANK YOU

● FOR YOUR NICE ATTENTION

mitra.ai — Your private memory friend in professional space

Team Sonny Hayes

Pudi Bhanu Swaroop · Yaswant K K · MTech, IIT Hyderabad · Product Arena 3.0 · April 2026

The Private-Professional Line

Why 'Your private memory friend in professional space' is data-backed, not a tagline

THE LINE IN DATA — COMFORT BY CONTEXT

6.86	Work Meetings Safe — primary use case
6.48	Online Calls Safe — primary use case
6.26	Open Office Acceptable — professional shared space
3.58	Personal Conversations Hard boundary — never cross this

WHY THIS LINE IS THE PRODUCT

Insight #8 — Personal-Professional Paradox Everyone wants a personal space within a professional space. The line is contextual and user-defined. No tool has built this line — personal and collaborative memory are separate products when they should not be.
Primary Research — Two Privacy Personas Moderate (5–7) and High (8–10) personas are both comfortable in professional contexts. Neither is comfortable in personal conversations. The product is calibrated for exactly this divide.
The Lifecycle Bet Every student who builds the habit in academic environment carries a tool designed to bloom inside a workplace. Students are the entry path, not the destination.
The Trust Paradox — Root Cause People fragment information as a defence mechanism, not a preference. In the professional environment, the cost of fragmentation is highest. Mitra.ai draws the line — private by architecture, professional by design.

Mitra.ai doesn't just respect the private-professional line — the entire architecture is built on it. Privacy is the spine. Professional context is the use case. The line is the product.

Breach Protocol

A privacy backlash doesn't threaten Mitra.ai — it validates it

Universal principle: DETECT → CONTAIN → NOTIFY → RECOVER · User informed within 2 hours of any confirmed breach

Device Breach Physical access	Cloud Breach Server compromised	Connector Breach MCP intercepted	Account Breach Login compromised
DETECT Anomalous local file access flagged CONTAIN Local memory locked, all connectors suspended NOTIFY Push to backup device and email RECOVER User verifies identity, unlocks selectively	DETECT Server-side anomaly, unusual data egress flagged CONTAIN Affected vaults isolated, connectors suspended NOTIFY Email and push within 2 hours, scope communicated RECOVER Free migration to local file system offered	DETECT Connector health monitoring, payload integrity checks CONTAIN Affected connector disabled immediately NOTIFY User told exactly which connector was compromised RECOVER Connector rebuilt from scratch, user re-authenticates	DETECT Unusual login location or device fingerprint mismatch CONTAIN All active sessions terminated across every device NOTIFY User alerted with full details of suspicious session RECOVER Full re-authentication, optional complete memory audit

Memory Lock — one tap suspends all connectors, encrypts the memory layer with a user-only key, and disconnects from cloud storage. Airplane mode for your memory.

Supporting Insights

Additional secondary research insights and data points

INSIGHT #2

The Habitat Law

Tools with strongest triggers colonise existing habits. WhatsApp and Gmail win because users are already there. Trigger strength = depth of habitat, not quality of app.

INSIGHT #5

The Aspiration-Behavior Gap

PKM tools sold the aspiration without fixing the behavior. PKM identity mean 7.08, median 8 — real system is screenshots and WhatsApp.

INSIGHT #9

The Investment Paradox

Tools with highest switching cost have highest silent churn. Investment becomes psychological weight. Our moat avoids this by always paying out.

INSIGHT #10

The Mobile-Desktop Gap

Best capture moments happen on mobile. Best tools are built for desktop. Mobile winners — WhatsApp, Voice Memos, Screenshots — have zero intelligence.

INSIGHT #11

Context vs Keyword Retrieval

Search is keyword-based. Human memory is context-based. 'That thing I read when stressed about the deadline' is a valid query no tool understands.

INSIGHT #3

The Organisation-Retrieval Tradeoff

Humans need structure to understand; AI doesn't need structure to retrieve. The more you invest in organising, the heavier the retrieval tax.
